2 Introduction

2.1 Scope

This document specifies the Core Invoice document type of the BPC Exchange Framework. The Core Invoice facilitates the exchange of structured invoice data between Access Points (Corners 2 and 3) on behalf of their Corner 1 and 4 participants. The Core Invoice only specifies the standard for the exchange between Corners 2 and 3. It does not define or prescribe how these must or should exchange data between their respective Corners 1 and 4.

The purpose of the Core Invoice is to establish a baseline data model for invoicing in the <Exchange Framework Brand Name>. It is designed to be simple enough to accommodate the capabilities of most suppliers and buyers, while at the same time offering functionalities that facilitate an acceptable minimum level of automation in the systems of the business partners. The Core Invoice furthermore serves as a starting point for other more comprehensive invoice document types where more advanced functionalities are required, such as in industry-specific invoice types or the support of complex business processes.

An invoice is a document sent from a supplier to a buyer with details of services or products to be paid. An invoice can either be part of a business process involving the exchange of various documents, such as purchase orders, contracts, etc., or it can be a standalone document used as documentation for a simple transaction between a supplier and a buyer.

The Core Invoice defines a set of common information elements and attributes used in electronic invoicing. It does not define, and does not presume to be, part of any specific business process; it is instead designed to be able to be used in any given scenario where an invoice is exchanged between two parties.

2.2 Conformance

The keywords 'MUST', 'MUST NOT', 'REQUIRED', 'SHALL', 'SHALL NOT', 'SHOULD', 'SHOULD NOT', 'RECOMMENDED', 'MAY', and 'OPTIONAL' in this specification are to be interpreted as described in RFC2119 and RFC 8174 when, and only when, they appear in all capitals, as shown here.

2.3 Terms and Definitions

For the purpose of this specification, all terms shall have the definitions defined in section 2.3 of the E-invoice Exchange Framework – Approach to Managing a Federated Registry Services Model in a Four-Corner Network report found here:

<https://businesspaymentscoalition.org/wp-content/uploads/bpc-e-delivery-network-validation-exercise-2020.pdf>

2.4 Normative status

This Core Invoice specification **MUST** be supported by all Access Points who exchange invoices on behalf of Participants in the BPC Exchange Framework, and the receiving of

Business Payments Coalition

Core Invoices **MUST** be supported by all Access Points on behalf of all their Participants who receive invoices through the BPC Exchange Framework.

All contents of this document, except for the provided examples, is normative, unless otherwise specified. All examples provided are non-normative, unless otherwise specified.

Any supporting artefacts developed in relation to this document are non-normative, unless explicitly referenced from this document as being normative. In case of discrepancies between this document and any supporting or related artefact, this document contains the normative information.

3 General Use

3.1 Business Document Identifier

The following identifier has been created using the bdx-docid-qns scheme and in accordance with BPC Identifier Policy, and **MUST** be used when referencing this Core Invoice profile:

The following identifier has been created using the bdx-docid-qns scheme and in accordance with BPC Identifier Policy, and **MUST** be used when referencing this Core Invoice profile:

`urn:oasis:names:specification:ubl:schema:xsd:Invoice-2::Invoice##bpc-1.0-data-Core`

All implementations and uses of the Core Invoice within the BPC Exchange Framework using the above identifier **MUST** be conformant with this document. All representations of the Core Invoice identifier **MUST** be in accordance with the BPC Identifier Policy.

4 Data Model

4.1 Use of OASIS UBL 2.3

The BPC Exchange Framework's Invoice Status message is a profile of the Document Status document type specified in the OASIS UBL 2.3 specification: <https://docs.oasis-open.org/ubl/os-UBL-2.3/UBL-2.3.html>

All core Invoice messages sent through the BPC Exchange Framework **MUST** conform to all conformance clauses in section 6.1 of the above specification.

4.2 Data Model

The following section represents the information elements included in the Core Invoice. The primary function of the data model in these processes is to define the fundamental information elements required to send and receive core invoices between businesses. Additional business processes can be supported with the extended invoice.
